

Cloud Migration

Guiding Customers on the Ultimate Azure Journey.

// The Kforce team is always looking for ways to innovate and leverage data to provide valuable insights to the business. We partnered with CCG to pilot Microsoft Synapse for a few of our largest datasets. We saw incredible time saving benefits during the pilot and will be expanding to other if not all datasets in the near future.”

—Kevin Davis, VP of Analytics and Architecture, Kforce

Cloud migrations can be very disruptive and costly to the business. By working with CCG, you'll gain access to certified technical and business-focused consultants to guide you through your migration so you can avoid risk, achieve a maximum return, and minimize problems with your cloud investment.

There is no denying that moving to the cloud has many benefits, but it's how you move to the cloud that's important. Often, businesses pay an unintended premium for moving their data to the cloud or get talked into merely performing a “lift and shift.” We work with your company to develop a plan that considers the ultimate goals for your data and analytics while optimizing your environment.

DO YOU FACE THESE CHALLENGES?

- Is your staff knowledge level specific to Azure not quite where it needs to be yet? Would it be beneficial to learn alongside experts?
- Are you concerned that your cloud initiative will take more time and cost more money than you expected?
- Do you worry about a failed migration or fail to see the return on investment quickly enough?
- Are you worried that moving to the cloud isn't enough? That your team will still face challenges with the data in your environment?

CERTIFIED CLOUD ENGINEERS TO GUIDE YOU

IN:

1

Azure Migration

As a Microsoft Gold Cloud Partner, 100% of our experts are certified in Microsoft Azure. Our experts help you deploy or shift your solution the right way the first time. Our consultants are backed by in-depth data, analytics, and cloud infrastructure expertise, understanding the right way to deploy new or existing applications, infrastructure, and data platforms.

2

Database Migration

Having a single source of truth for your enterprise data is essential. We work with you to understand the current database environment and aspirations and fine-tune the system features to create operational efficiency. As a Microsoft Gold Data Analytics Partner, our consultants have the technical understanding beyond just infrastructure to further prepare your environment for your data needs.

3

Hybrid Cloud

CCG helps you deploy your infrastructure with system architecture utilizing best practices and experiences gained from complex deployments in the cloud. We will further help manage the migration, provide DevOps services, and help you integrate with current IT assets. By leveraging CCG to help you with your hybrid cloud, we can ensure you have the right security, compliance measures, and post-migration configuration.

KEY BENEFITS OF PARTNERING WITH CCG

- 100% Azure Certified Experts
- Compliance certifications with SOX, SOC2, HIPAA, ITAR, and Safe Harbor/Privacy Shield
- Data, analytics, strategy and governance expertise ingrained in every cloud migration
- 99.8% customer retention for cloud services

36%

Percentage of error-related cloud breaches involved misconfigurations on databases

(Forbes, 2019)

Migrate to Azure with confidence and see if special Microsoft funding is available for your organization.
