

Common Data Science Use Cases

Use case definition can be the hardest and most important task, because it drives the value of the outputs.

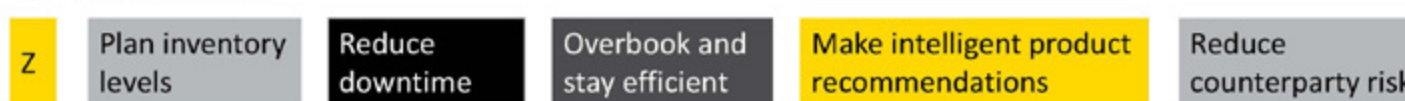

1) For every

2) If only I knew

3) Then I could

This template can also be used to find use cases for acquiring data (both internal and external) and for traditional reports / dashboards.

What makes it predictive is if it would typically require human intuition, or if the "true" value doesn't exist yet. I.e., it's a best guess. What other use cases can you think of?
