

Four Key Areas of Maintaining “As a Service” Cloud Technologies

In the journey to the cloud, there are three core cloud offerings – Infrastructure as a Service, Platform as a Service, and Software as a Service. Those offers, in addition to On-Premise Datacenter, make up the four core areas for an enterprise data environment.

The items in blue represent components or software that the enterprise (you) are responsible for maintaining; the items in orange are the responsibility of the cloud provider.

CCG is a data, cloud, and analytics company that can work with your enterprise to develop the right cloud approach, whether that be a complete cloud migration, multi-cloud, or hybrid cloud approach. Our strategy team can work with you to develop an in depth cloud assessment, migration strategy, custom optimization guidance, and management of your cloud environment. Visit [CCG’s Managed Cloud Services page](#) to learn more.
